1602 LED	1975	GD/ST 396.0833	Time Computer III	Gold filled or Stainless steel
1680	1997	1552.3	Quartz	Stainless steel

NOTES:

Approximately 85 - 88% of the data in these tables was extracted from the 'old' Omega vintage database. It was a feature of this database not to always list each case metal prefix (e.g. CD, BA, etc., denoting gold cap and solid gold). If this catalogue only mentions one prefix, please do not assume that the model was limited to the specific case metal denoted. If you encounter a case metal that is not listed here and you have done due diligence on the watch, you can safely assume it was also produced in other metals.

Around 12%+ of the watches listed in this catalogue do not appear in the Omega database. In each instance the watch and case number has been verified . Again, all case metals may not be listed, because only case metals encountered and verified appear in the listings.
